The Geneva Foundation is a 501(c)3 non-profit organization that supports innovative medical research within the U.S. military. Recognizing the potential contribution to both military and civilian medicine, congressional language authorized certain non-profit foundations, such as The Geneva Foundation, to facilitate partnerships between military researchers and public or private organizations.

For over 20 years, Geneva has partnered with industry sponsors including pharmaceutical companies, CROs, device companies, biotech companies, and academic institutions to conduct clinical trials within military sites. A recognized leader in the DoD, Geneva enjoys a reputation for exceptional service and singular commitment to its sponsors and researchers.

**Collaborating with Geneva**

The Geneva Foundation facilitates collaboration between industry sponsors and military researchers for the conduct of FDA-regulated, Phase I-IV clinical trials in Military Treatment Facilities across the United States. Geneva’s clinical trials team consists of experienced project leaders focused on providing on-time, quality data in accordance with the sponsor’s expectations and all applicable governing regulations.

Geneva’s services in support of industry sponsored research include:

- Negotiation and execution of the Clinical Trial Agreement and CRADA
- Completion, submission, compliance, and continued documentation of the regulatory package by dedicated regulatory staff
- Coordination of budget development and financial management
- Trained Clinical Research Coordinator support
CLINICAL TRIALS CAPABILITIES

COLLABORATING WITH GENEVA (CON’T)

- Ongoing project management oversight
- Coordination of subject enrollment and clinical conduct in support of protocol
- Compliance with FDA regulations and GCPs
- Management of study close-out and financial reconciliation

GENEVA’S APPROACH

By employing a holistic management approach, Geneva’s team of experienced staff provide sponsors and researchers with continuous and hands-on attention designed specifically to: increase the enrollment of clinical trials; relieve the investigator of non-research related administration to focus on quality data; relieve the sponsor of government regulatory and contracting burdens; and assure the comprehensive and timely management of all trials.

DIFFERENTIATORS

The military medical community offers a diverse research population within a full range of therapeutic areas. The military community is representative of the diseases and conditions that occur in the civilian community as well as those that are unique to members of military service.

Benefits of conducting trials within the military include:

- Highly compliant patient populations composed of active duty military personnel, their families, and veterans
- Electronic health records
- Onsite primary and specialty care, as well as auxiliary services
- Cost effective trials
- A single clinical trial agreement that supports the involvement of several different Military Treatment Facilities within the U.S.
