ABOUT THE AUTHORS

Sharon A. (Sherri) Bracy, M.A., has more than 27 years of experience in drug and device clinical development. She is principal of Bracy Consulting, at which she has developed processes and SOPs for clients (academic, nonprofit and industry) and supported implementation of new processes and procedures, including training programs. She has held positions of increasing responsibility and scope at Alcon Laboratories, R&D division, from biostatistician to clinical monitor, to positions focused on standards, processes, procedures and training. She established standard global clinical processes and procedures for both drug and medical devices studies, implemented clinical trial management and data systems and developed a comprehensive study manager and study monitor training program for both technical and soft skills (GCP, SOPs, clinical project management, monitoring). As director of R&D training, she developed and implemented training programs in quality systems, business competencies and business systems. She also led a quality process improvement group in defining and improving R&D business processes. She is a member of the Association of Clinical Research Professionals (ACRP) and the Drug Industry Association (DIA).

Jerry M. Stein, Ph.D., ACRP-CP, is a scientist with more than 40 years of experience conducting research in the clinic and the laboratory. He is currently a clinical research consultant working with emerging pharmaceutical and medical device companies. He also is an independent medical writer engaged in developing drug and medical device regulatory documents, project plans, manuscripts and clinical SOPs. During his long career at Alcon Laboratories, he progressed from clinical monitor to leading the centralized U.S. clinical monitoring organization. He brings a practical approach to the development of clinical SOPs based on his experience working on several SOP development teams, preparing FDA and international submissions, managing a complex monitoring organization and troubleshooting problematic study sites. He led successful R&D and clinical projects leading to the marketing of many of today's most popular lens care and OTC dry eye products. He has published more than 30 articles and is a member of the Association of Clinical Research Professionals (ACRP), American Medical Writers Association and the American Academy of Optometry. He serves as the Chair of ACRP's editorial advisory board for their peer-reviewed journal, *Clinical Researcher*, and is an active member of several of the organization's key committees.
